GeoMIP 2025 - program for 15th meeting
Cape Town, South Africa; May 16, 2025

Monday (05/12) - Thursday (05/15) - Degrees Global Forum
Friday - May 16 (we will provide a virtual option)

A preparatory document for the meeting is available here.

9:00am - 10:00am - Introduction and updates on current experiments
We will provide an update on current needs for CMIP7 and other GeoMIP topics, including the location of the 2026 meeting; Walker will provide us un update on early results from the G6-1.5K-SAI.
Alan Robock
Daniele Visioni
Walker Lee - G6-1.5K-SAI
10:00am - 11:15am - The future of marine cloud brightening climate modelling and analysis
Haruki, Matthew & Sarah will discuss the current state of testbed experiments related to MCB in GeoMIP, including plans for a G6-1.5K-MCB testbed and an invitation for other modeling centers to participate and discuss what the future experiment should look like.
Haruki Hirasawa
Matthew Henry
11:15am - 11:30am - Coffee Break
11:30am - 12:30pm - Consultations about statistical downscaling of GeoMIP output
DEGREES, CarbonPlan and other partners (University of Cape Town and Cornell University) have a new proposal to produce globally downscaled results of GeoMIP results that will also be available for download and analyses on the cloud. In this session, community input will be asked about various aspects of this project, such as variables of interest, specific needs and input over the whole process, that we're aiming to make as participative, open and transparent as possible.
Ori Chegwidden
Hassaan Sipra
Andy Parker
12:30pm - 1:30pm - Lunch break
1:30pm - 2:30pm - Discussion of future experiments
Alistair and other partners will show preliminary results about a testbed experiment related to high-latitude SAI already performed with some climate models, and will discuss plans for a targeted GeoMIP experiment (G6-1.5K-polar) that will benefit from input from the community.
Alistair Duffey - G6-1.5K-polar proposal

2:30pm - 4:30pm - Other topics of discussion based on community input
